

LAURENT BLEU[®] Our Philosophy

Our philosophy

Care

One of the primary functions of Laurent Bleu Skin Science Centre is to provide ongoing care for all skin care needs. Our staffs are leaders in their fields, using their training, expertise, and research outcomes to provide world-class patient care. We seek to provide the most effective and appropriate treatment for skin and health problems as well as enhancement.

Training

The Faculty of Medical Sciences of UCSI trains undergraduate medical students to have a grounding and basic training in Dermatology through the Doctor of Medicine Programme with LBSSC providing the facilities and practical clinical experiences for the medical students. The development of clinical skills is achieved through examination of patients under staff supervision in the various clinical settings associated with the program.

Postgraduate and continuing medical education in anti-aging, aesthetic and regenerative medicine are also conducted at the centre by UCSI's Faculty of Medical Sciences. The centre is also an approved training centre for several FDA-approved skin treatment equipment.

Hands on training on the use of medical grade skin treatment equipment are also offered for our student nurses from UCSI's School of Nursing as well as practicing nurses from clinics and hospitals.

Research

Laurent Bleu Skin Science Centre is actively engaged in research in order to advance knowledge of skin and health science and enhance the practice of skin as well as health care. The doctors at LBSSC are actively engaged in clinical trials and medical research in collaboration with the academic staff of the Faculty of Medical Sciences.

Our School of Pharmacy is also involved together with LBSSC on skin care products testing and development. Clinical trials are conducted to evaluate the effectiveness and safety of various types of skin enhancement products and treatments under the supervision of UCSI's own ethical panel of advisory.

By analyzing the needs of the community, we design research projects to address those needs. The output of our research is new knowledge, new products, new techniques, new patents, and more - we take this information back to our clinical settings to help and treat our patients.

LBSSC through our R&D initiatives in collaboration with international research institutions seek to establish our own Malaysian centre of excellence in skin science.
